Analyses executed QARUSH, CANX		

Laboratory note: The estimated concentration of the unknown peak in the sample is 8.94% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)d8-THC or d9-THC. At this time there are no reference standards available for (+)d8-THC. (+)d8-THC is a different compound from the main (-)d8-THC contabination of (+)d8-THC and 9-THC and 9-THC and 9-THC as a different efficacies. Using the most advanced instruments and techniques available, the separation of (+)d8-THC and 9-THC and 9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)d8-THC with the majority, if not all, of the concentration being (+)d8-THC. Total (+/-) D8 concentration is estimated to be 88.6%
